Mywindparts is joining the Voltalia group in order to accelerate its growth in France and abroad

Founded in 2016 by Sébastien Duchesne, an engineer with a passion for wind turbines, Mywindparts helps wind farm operators manage the supply chain.

Mywindparts has joined Voltalia, an international player in renewable energies. Voltalia is an electricity producer, with more than 1 GW in operation and construction, and also provides services in Development, Construction and Maintenance for its own power plants and those of its clients in the renewable energy sector.

With Voltalia present in 19 countries across three continents, this merger provides Mywindparts with the financial and logistical resources to pursue and accelerate its growth in Europe and abroad. Mywindparts adds to Voltalia's range of services for wind turbine maintenance, for both its own power plants and those of its third-party clients.

About Mywindparts

More than a mere spare parts distributor, Mywindparts can meet all wind turbine, spare parts requirements, be they electric, mechanical or hydraulic, major components, wear parts or consumables and offers:

- Personalised guidance, based on analysis and advice on balancing stocks, optimising security reserves and establishing relevant stocks...
- Technical support for the 'components' part (equivalent parts, repair of parts, etc.). Assistance in finding specific parts or parts that are out of stock.
